What's Included

Control Panel

A suite of tools to administrate every aspect of your service. Purchase additional products and gain access to invaluable online support resources and "how to guides".

Xsite Manager

The site manager provides the novice to experienced user tools for managing the structure of their site. You can change file permissions, create directories, create, move and rename files all from our intuitive web interface.

Content Publishing

Many web publishing applications like Dreamweaver™ use File Transfer Protocol (FTP) to upload your finished pages. FTP is the industry standard for communicating directly with your allocated site space on a file or web server. The Virtual Server includes one FTP user account which will connect you directly and securely into this space.

PHP & MySQL Support

For those wanting to experiment with dynamic database driven sites, we include access to server side PHP and MySQL (for 50Mb - 1000Mb packages).

Backup

All Virtual Server sites are backed up to tape archive, including any MySQL databases.

Site Statistics

Every visitor to your site will be logged in the access log for your site. The web based statistics provide a wealth of information to assist you in understanding the browsing habits of your visitors.

CGI Access

Common Gateway Interface is the most simplistic of 'middleware' solutions. Typically sites will use CGI to gain access to online forms and visitor counters. Your virtual server has access to both such facilities.

Secure Server

E-Commerce transactions are coming to increasingly insist upon some form of encryption when sensitive payment data is passed to the web server. Virtual Server users can make use of this essential technology by purchasing SSL certificates. Full support and purchasing can be sought from F255
